

CEI NPDEStimator

What: The NPDEStimator tracks pollutant load reductions and costs to assist in compliance with TMDLs, anti-degradation requirements, NPDES permits and other stormwater efforts to measure progress. Helpful for cost-benefit analysis of various alternatives for stormwater improvements.

Why: This tool can save money by tracking many activities that can count towards compliance.

Useful for: TMDL and NPDES compliance and compliance in certain grant programs.

Can prove compliance, as well as reduce overall costs of implementation and compliance. There are no similar tools.

Advantages:

- Counts many activities that might be overlooked.
- Can reduce costs and improve overall outcomes.
- May prevent fines and penalties if kept up to date.
- Can be tailored to various watersheds and pollutants of concern.
